SOFT CHEWS

ProDen DentalCare® Soft Chews promote good dental and oral health. The active ingredient A.N ProDen® is a unique and clinically proven kelp that works continuously with the saliva to soften and loosen existing tartar, while helping to prevent new buildup of both plaque and tartar.

Recommended to help maintain clean teeth in adolescent animals, or after a professional dental cleaning. Also recommended to help fight existing plaque and tartar to support healthy teeth, gums and freshen breath, especially when a dental procedure is not an option. Results are normally seen after 3-8 weeks of continued use.

Contains natural ingredients and formulated specifically for palatability in cats. These delicious soft chews are designed for oral health with the benefit of a treat-like experience.

Contains about 8 kcal per soft chew.

ACTIVE INGREDIENTS (per 2.5g soft chew):

A.N ProDen™ (*Ascophyllum Nodosum*)..... 330 mg Specially selected organic kelp

INACTIVE INGREDIENTS: Saccharomyces boulardii, canola oil, potato starch, glycerin, lecithin, mixed tocopherols, molasses, rosemary, sorbic acid, tapioca starch, vegetable oil, water.

DIRECTIONS FOR USE: Intended for cats that have their adult teeth. Give 1 soft chew per day.

Pet Size	Daily Amount	45ct Jar Lasts
Cats	1 soft chew	6 weeks

CAUTIONS: Kelp is a natural source of the nutrient iodine. For some animals with thyroid problems it may be important to limit the intake of iodine. Therefore do not use long term or in animals with thyroid disease unless directed by a veterinarian. Do not use in pregnant or lactating animals.

STORAGE: Store at 15°-25°C, out of direct sunlight, with lid tightly closed.
